

The Rubber Duck Museum

2026 Skills USA Kansas State Web Design and Development Contest

Overview

Welcome to this year's Web Dev Contest!

Your task is to design and develop a responsive, engaging website for the **Rubber Duck Museum**. This museum celebrates the whimsical, nostalgic, and surprisingly rich history of the rubber duck — while promoting a meaningful conservation mission.

The site should balance fun, creativity, and professionalism while clearly communicating the museum's purpose, exhibits, and visitor information.

Wireframe Planning

Your team will turn in a wireframe. Mobile and Web Views only.

With our mission to help save animals (especially ducks) caught in oil spills, we have a gift shop to help raise funds for these poor things. Your team will create a low-fidelity wireframe for the gift shop page. This is to be done before you start coding.

Objective

Your team has been given a wireframe from the client. Your website should loosely follow their given structure, but feel free to get creative with it. This document contains helpful information about the museum that you can use to add content to the webpage. The expected sections include:

1. **Plan Your Visit**

2. Our Mission

3. Current Exhibits

Required Content Sections

1. Plan Your Visit

This section should provide a realistic museum visitor experience. Include:

- Museum hours: Monday-Saturday 9am-6pm
- Location: 123 Fake St. Tsawwassen Mills, Canada
- Ticket pricing: Free-will donation, gift shop and misc. Events are used to raise funds for the cause

Make it engaging and visually inviting. Think: family-friendly, playful, but polished.

2. Our Mission

The Rubber Duck Museum exists for more than nostalgia.

- Our mission statement:
The Rubber Duck Museum celebrates the joy and history of rubber ducks while raising funds to rescue and protect real ducks affected by oil spills. Through education and community engagement, we turn playful nostalgia into meaningful environmental impact.

The tone of the site should be heartfelt and inspiring. Participants should clearly connect the playful theme of rubber ducks to real-world environmental responsibility and wildlife protection.

3. Current Exhibits

This is where your creativity shines. Include at least two exhibits, such as:

- **The History of the Rubber Duck**

- Early bath toys in the 19th century
- The rise of molded rubber production
- The iconic mid-20th century floating yellow duck design
- Cultural moments (pop culture, collectibles, global duck races)

- **Duck Duck Jeep**

Include a feature on the popular community movement where Jeep owners place rubber ducks on fellow Jeeps as a symbol of kindness and connection.

Possible Highlights:

- Its origins
 - How it spread across social media
 - The sense of community it fosters
- A creative or interactive exhibit of your own design
(Examples: Giant Inflatable Duck Gallery, Oil Spill Awareness Simulation, Duck Design Lab, Rubber Ducks Around the World)
 - An event such as the duck races where tens of thousands of plastic ducks are released, or the natural behavior of diving ducks (like Mergansers) running on top of the water to gain momentum for takeoff. These events, such as the Ken-Ducky Derby, often occur in late summer or early fall.

***Important Note:** The mobile wireframe only includes ONE current exhibit due to space restrictions. However there should still be **TWO**.

Chair/Client Comments

- The Wireframe is a guide. You may not remove whole sections. However, should you feel a section needs a more polished look, you are welcome to flex it. So long as the above requirements are met.

- The Client is not dictating any overall colors, because our wonderful ducks come in all shapes and sizes, however, we do love our logo. Please do not alter it except to remove the background or resize it as needed.
- We have provided lots of photos Not all are named well or aspect-ratioed to your needs. Resize them; rename them. They do not all need to be used. Select the photos that work best for your design.
- Design effects such as animations and parallax are encouraged but not required. Your overall site should be cohesive and polished. A finished site with no extras is better than half a site covered with animations.
- This is a TEAM contest. It is meant to be a challenge, but it is not insurmountable. Collaboration is your friend.
- Resources such as Google Fonts and Unsplash are encouraged. All photos must either be free licensed or credit given to the artists.
